

# TECHNOLOGY AND INNOVATION

Today, every company is a technology company.

---

Data analytics, for example, is essential to run every size of business, from start-ups to Fortune 500 companies. There are many important issues to understand and navigate with the emergence of new technologies like artificial intelligence, facial recognition, telemedicine, quantum computing and autonomous vehicles to name a few. Our goal is to help ensure policymakers are well informed on the issues, build meaningful coalitions and prevent the enactment of burdensome regulations and legislation that could ultimately impede the advancement of technology and innovation.
